C H A P T E R S

School Club Program

Real Engineering. Real Hardware. Real Futures.

Zuup | zuup.dev
jagrit@zuup.dev | +91 1136812199
Program Year: 2026

Prepared for School Principals
Pan-India Launch | Class 6-12
Non-Profit Organization

A Direct Note

Respected Principal,
As a school leader, you are entrusted with decisions that shape not only academic outcomes but the overall growth and exposure of your students. Every new initiative must be evaluated with care for its safety, credibility, long-term value, and alignment with your institution's standards.

Zuup Chapters has been designed with that responsibility in mind.

The program is a structured 10-month engineering club that gives students guided, hands-on experience with real electronics, microcontrollers, and hardware systems. It is not a short workshop or a presentation-based activity. Instead, it is a sustained learning environment where students progressively build technical confidence through practical application, mentorship, and documented project work.

We recognize that meaningful technical education requires more than enthusiasm; it requires structure, accountability, and institutional clarity. For that reason, this proposal outlines the curriculum month-by-month, defines the mentor framework, and explains the operational model in transparent detail. The program is intended to function under school supervision as a co-curricular activity, complementing not competing with your existing academic framework.

Our objective is simple: to provide students with meaningful exposure to real engineering tools and processes in a structured, accountable manner. We welcome your review, questions, and evaluation, and would be honored to explore whether this initiative aligns with your institution's vision for student development.
Respectfully,
Zuup Chapters Team

10 Mo	Rs.1,200	6-12	Rs.1L
Program Duration	Monthly Fee	Grade Range	Max Grant

Everything in this document is real, verified, and already proven at school level. Zuup does not ask for trust without evidence -- it hands you the evidence first.

About Zuup

The Organization

Zuup is a non-profit organization (NPO) that operates strictly without commercial motive. Every rupee collected through the Chapters program goes toward hardware procurement, mentor compensation, platform operations, student grants, and program sustainability. There is no investor return, no profit extraction, and no shareholders. Zuup is structured this way deliberately because programs that make money off schools eventually start optimizing for revenue instead of student outcomes.

Zuup is a Zylon Labs initiative. Zylon Labs was founded in 2021 and has since built products and programs across edtech, quick commerce, security, and AI. The organization's credibility comes not from marketing materials but from independently verified achievements.

Verified Achievements

TV	*	P
Shark Tank India	**SME Business of the Year**	**IJRASET Research**
Phase 2 Cleared	Award Winner 2025	Peer-Reviewed Published
Investor validated	National recognition	DOI: 10.22214/ijraset.2025.73265

External Recognition

Zuup has undergone evaluation in competitive startup and innovation platforms, including advancing to Phase 2 in Shark Tank India's screening process. While Zuup did not appear on the televised broadcast, progressing through early screening stages provided valuable external validation of the model's structure and execution clarity.

Additionally, Zuup has received national-level recognition including the SME Business of the Year Award 2025 and the Young Genius Award 2024.

We are happy to provide documentation of recognitions upon request.

Research Paper: AI for Social Good

Identifying and Bridging Freelance Skill Gaps in Underprivileged Communities Using Machine Learning

Published in International Journal for Research in Applied Science and Engineering Technology (IJRASET) -- July 2025

DOI: 10.22214/ijraset.2025.73265

Research and Academic Writing Pathway

Zuup includes an optional research documentation pathway for advanced students. Students working on technically strong projects are guided through structured documentation, literature referencing, and academic writing fundamentals. Where appropriate, students may submit their work to suitable student-level journals or innovation platforms. Publication is not guaranteed and depends entirely on the quality and originality of the project.

The focus of this pathway is skill development in research methodology and technical documentation valuable for higher education preparation.

Our Philosophy

> **"Teach real engineering. Ship real things. Build real futures."**

India produces hundreds of thousands of engineering graduates every year who cannot debug a circuit, identify a capacitor, or write a line of embedded code without a tutorial. The gap begins in school. The clubs that were supposed to build technical intuition instead taught pitch decks, business model canvases, and app mockups that never ship. Students graduated from these clubs fluent in the language of startups but functionally unable to build anything.

Zuup Chapters exists to fix that. A student who has programmed a Raspberry Pi Pico at age 13, debugged a floating GPIO pin at age 14, designed a PCB at age 15, and contributed to a published research paper at age 16 enters college or the workforce fundamentally more capable than one who has a shelf of participation certificates from pitch competitions.

This is not an anti-entrepreneurship stance. Engineering ability and entrepreneurial thinking are not in competition. Zuup believes the best student entrepreneurs are the ones who can actually build what they pitch. The program builds builders first everything else follows.

What Your School Gets

- A nationally recognized Zuup Chapter affiliation
- Listing in Zuup's national school directory
- Chapter branding materials and official signage
- Monthly student progress reports to administration
- Research publication outcomes credited to your institution
- Priority hosting rights for regional competition events
- Social recognition -- every Zuup achievement tags partner schools

What Your Students Get

- Hardware kit they own permanently
- Training from vetted, compensated engineers
- 10 months of structured technical curriculum
- Competition experience at school, regional, and national level
- Research paper publishing pathway
- Grant funding access up to Rs.1,00,000
- National Finale opportunity with sponsored travel
- Zuup Alumni network and international program eligibility

The Program

Structure and Delivery Model

Zuup Chapters runs as an official extracurricular club within your school. The club is branded as the Zuup Chapter of your institution and appears in all national Zuup directories and communications. It runs in parallel with your existing academic timetable -- not in competition with it. Session timing is coordinated with your administration.

How the Program Runs

Duration: 10 months per program year

Grade Range: Class 6 to Class 12

Batch Size: 15 to 40 students per chapter

Session Frequency: Minimum 2 sessions per month

Format: In-person mentor visit + self-paced LMS between sessions

Space Required: Any classroom or open area -- no lab needed

Board Compatibility: CBSE, ICSE, State boards -- all compatible

Language: Sessions in Hindi or English per student preference

What Runs Between Mentor Visits

The Zuup LMS is live 24/7 and accessible from any device. Between monthly mentor visits, students complete video labs, theory modules, and project check-ins on the LMS. The platform tracks every student's progress, flags students who fall behind, and sends weekly reports to the chapter mentor.

Students who move faster than the cohort can access advanced challenge modules. Students who need more time get additional LMS resources and a direct mentor check-in call. No student is left behind or held back.

The Hardware Kit

Every enrolled student receives a personal hardware kit at program start. It belongs to them. Not the school. Not the lab. When the program ends, the kit goes home with the student and stays there. This is the single most important design decision in the Zuup model ownership creates engagement that shared lab equipment never can.

WHAT'S IN EVERY STUDENT'S KIT

Raspberry Pi Pico (RP2040) -- the main microcontroller for Months 1 through 5. Industry-standard. Used in real products.

ESP32 Development Board -- Wi-Fi and Bluetooth built in. Used for IoT projects in Months 5 and 6. Used in real products.

Sensor + Module Pack -- Temperature, Humidity, PIR motion, OLED display, Servo motor, RGB LEDs, resistors, capacitors.

PCB + Soldering Kit -- Soldering iron, solder wire, PCB blanks, desoldering wick, helping hands stand.

Zuup T-Shirt (chapter-edition) -- student's size, shipped with the kit.

Zuup Enamel Badge + Official Chapter Member ID Card -- the identity of being a Zuup engineer.

10-Month LMS Access Code -- curriculum, video labs, project submissions, research writing module, challenge labs.

10 Month Curriculum

The curriculum moves a student from zero prior knowledge in electronics to a fully functional, documented, competition-ready embedded systems or IoT project. The structure is deliberately sequential each month builds on the last. No module is optional. The curriculum was designed based on real sessions run at Bal Bharati Public School, Rohini, and refined based on what actually worked with real students.

Period	Module	What Students Learn	Deliverable
Month 1-2	Foundations	Electronics basics, circuit theory, breadboarding, Ohm's Law, component identification	Functioning LED matrix project
Month 3-4	Microcontrollers	Raspberry Pi Pico -- GPIO, PWM, ADC, MicroPython, sensor interfacing	Temp/humidity station with OLED display
Month 5-6	Wireless + IoT	ESP32 -- Wi-Fi, BLE, MQTT protocol, cloud dashboards, real-time data	IoT sensor dashboard visible from any browser
Month 7	PCB Design	KiCad basics, schematic capture, PCB layout, design rules, Gerber export	Custom PCB design sent for fabrication
Month 8	Soldering + Build	SMD/THT soldering, testing, debugging, multimeter and oscilloscope skills	Fully assembled and tested custom PCB
Month 9	Project Sprint	Full project ideation, bill of materials, prototype build, iteration and documentation	Working, documented hardware prototype
Month 10	Demo + Compete + Publish	Presentation skills, research writing, pitch prep, interschool competition entry	Chapter showcase + national finale entry + research submission

Assessment and Progress Tracking

Every student is assessed at three levels simultaneously: through LMS-based module completions (auto-graded), mentor-reviewed project deliverables (qualitative feedback), and competition outcomes (external validation). This three-layer model means no single assessment determines a student's standing. A student who struggles with LMS theory but excels at hands-on building is not penalized they are recognized differently.

LMS Assessment

- Module completion checkpoints after each topic
- Video lab submissions reviewed by mentor within 48 hours
- Auto-generated progress report sent to admin monthly
- Challenge lab scores feed into chapter leaderboard
- Research writing module -- peer and mentor reviewed

Mentor Assessment

- Live session participation and build quality scored each visit
- Debugging ability can the student diagnose their own circuit
- Project documentation quality does the work speak for itself
- Research potential flagging mentor nominates top candidates
- Grant application support mentor endorsement required

Month 10 (Where It All Comes Together)

The final month of the Zuup Chapters program is deliberately structured as a convergence of everything the student has learned. It is not a passive capstone. Students prepare their Month 9 prototypes for public demonstration, complete the research writing module, submit for interschool competition consideration, and present at the chapter showcase an event held at your school, open to parents and administration.

The chapter showcase is the moment a school sees the ROI of the program made visible: students standing next to hardware they built from scratch, explaining what it does, how they built it, what they would do differently, and what they want to build next. It is the most convincing demonstration of engineering education working that a principal will see in their career.

The Mentor Model -

The quality of the mentor is the quality of the chapter. Zuup knows this, which is why the mentor selection, training, and management process is the most rigorous part of the entire program. Mentors are not sourced from a volunteer database, assigned randomly, or left unsupported after their first session. They are vetted engineers who go through Zuup's 40-hour internal certification program before they step into any school.

What Every Mentor Must Have

- Engineering background ECE, CSE, or EEE required minimum
- Clean background verification checked before assignment
- Completion of Zuup Mentor Certification 40 hours internal
- Demonstrated hardware skills practical assessment required
- Communication ability rated by students from Session 1
- Research writing familiarity to support publication pathway
- Willingness to be rated and replaced if performance drops

What Mentors Do Every Month

- Conduct 2+ structured in-person sessions at your school
- Lead hardware builds and live debugging alongside students
- Review all LMS project submissions with written feedback
- Coordinate interschool competition preparation
- Send monthly chapter progress report to Zuup HQ
- Nominate top students for research pathway and grant applications
- Identify and flag Grand Finale candidates

Mentor Accountability That Actually Works

Mentor performance is monitored continuously through structured feedback and internal evaluation processes. Where required, corrective action or reassignment is undertaken to maintain program quality.

Research Paper Support

No other school club program in India offers structured research paper publishing support to students. Zuup does because Zuup has already done it. The research paper published in IJRASET (DOI: 10.22214/ijraset.2025.73265) was produced by the same team that now guides chapter students through the process. The pathway is established, the journal relationships exist, and the process has been simplified for student-level work.

The Research Pathway

- Month 10 LMS includes a full research writing module
- Students with technically strong Month 9 projects are nominated by mentors
- Zuup's research team reviews drafts and provides structured feedback
- Submission guided to appropriate journals IJRASET and equivalents
- Co-authorship support where Zuup's team contributes substantively
- Certificate of Research Completion for all pathway participants
- Published papers credited to the student's school in the journal listing

Why This Matters for Principals

- A school whose student publishes a peer-reviewed research paper is nationally notable
- Published research is one of the strongest differentiators in college applications
- It positions your school as academically ambitious beyond board examinations
- Zuup's established IJRASET relationship means the process is not experimental
- The school is credited in the paper institutional recognition, not just individual
- The research module is included in the Rs.12,000 fee no additional cost

The Zuup Student Grant -- Up to Rs.1,00,000

Got a crazy idea? Zuup will fund it.

Students working on genuinely bold, technically ambitious projects can apply for a Zuup Student Grant of up to Rs.1,00,000 to fund components, prototyping, testing, or further research. This is a grant not a loan, not a competition prize, not a reimbursement. Zuup funds it directly.

Grant Details

- Maximum value: Rs.1,00,000 per student or team
- Open to all active Zuup Chapter students
- Disbursed in milestone tranches -- not lump sum
- No repayment this is a grant, not a loan

How Students Apply

- Chapter mentor must first nominate the student
- Student submits a project plan with component list and timeline
- Zuup's internal grant panel evaluates: ambition, feasibility, impact
- Decision communicated within 14 working days of submission

Fee Structure (Every Rupee Accounted For)

Fee Structure Transparency

The annual student contribution of Rs.12,000 is structured to cover hardware procurement, mentor compensation, LMS access, competition operations, and administrative costs.

A portion of program surplus is reserved for student grants and operational sustainability of the non-profit.

A detailed cost breakdown is provided below for transparency.

Component	Value	Principal's Note
Raspberry Pi Pico + ESP32 + Full Sensor Pack	**Rs.3,800**	Student keeps all hardware permanently
PCB + Soldering Kit (iron, solder, wick, blanks)	**Rs.1,200**	Real tools, not plastic toys
Zuup Merch (T-shirt + Enamel Badge + Member ID)	**Rs.600**	Official chapter identity
10-Month LMS Access (curriculum, labs, assessments)	**Rs.800**	Structured self-paced learning between visits
Monthly Mentor Visits -- vetted engineers, in-person	**Rs.2,800**	The most expensive line. Worth every rupee.
Interschool Hackathon Circuit Entry	**Rs.800**	Fully managed, quarterly, no extra charge
Zuup National Finale Entry	**Included**	Automatic for top performers
Research Paper Publishing Support	**Included**	Mentor-guided, IJRASET-standard pathway
Student Grant Eligibility (up to Rs.1,00,000)	**Included**	For bold, technically ambitious projects
Program Operations + Insurance + Admin	**Rs.1,000**	Full backend support from Zuup HQ
Total Program Cost per Student	**Rs.11,000**	
Student Pays (10 installments of Rs.1,200)	**Rs.12,000**	Rs.1,000 surplus funds grants + NPO sustainability

Zuup's Official Position on School Markup

Zuup is a non-profit. We strongly discourage schools from adding any markup to the Rs.12,000 student fee. Our pricing is lean, fully costed, and transparent. Adding a markup reduces value delivered to students and conflicts with Zuup's non-profit mission.

If a school chooses to charge a coordination fee, the maximum permitted is Rs.1,000 per student (total: Rs.13,000). This may or may not be disclosed to parents in writing at enrollment, howsoever Zuup is not responsible for any charges above Rs.12,000 that are not disclosed.

Competitions, Activities, and the National Circuit

Your Chapter is Part of Something National

Every Zuup Chapter is connected to the national Zuup network from Day 1. Students are not competing only within their school. They are competing against, collaborating with, and learning from students across India. The national circuit is not a promise for Year 2 it is live and running from the first quarter of the program.

Interschool Hackathon Circuit

Regional interschool hackathons run every quarter. Chapter students compete in teams of 2 to 4 on a defined hardware theme with a 6-hour build window. Judging is based on functionality, technical complexity, and documentation quality -- not presentation aesthetics or pitch fluency. Your school's chapter participates as a unit. Rankings are published nationally.

Chapter Leaderboard (Live, National)

Every student in every chapter across India has a live score on the Zuup national leaderboard, updated by LMS completions, project submissions, mentor scores, and competition results. Top-ranked students are visible to the entire Zuup community. The leaderboard directly determines Grand Finale eligibility and grant nomination priority.

The Monthly Build-Off Challenge

Every month, Zuup releases a Build Off brief: the same component, the same challenge, every chapter in India. Teams have 30 days. Solutions are submitted via video documentation on the LMS and reviewed by Zuup's technical panel. Top chapters win hardware rewards that go back into the chapter. This keeps the competitive energy alive between quarterly hackathons.

Research Symposium (Annual)

Zuup's annual online Research Symposium is a formal academic event where students who have completed or submitted research papers present their findings to peers, mentors, and external evaluators. Participants receive a Zuup Research Presenter certificate. The symposium is recognized in college and scholarship applications as a verifiable academic event, not just a school show.

Peer Mentorship Exchange

Senior chapter students typically Grade 10 to 12 are connected by Zuup with newer chapters in their city or region to serve as peer co-mentors for younger students. This is not a burden on seniors. It is a leadership development opportunity that builds their communication skills, reinforces their own technical understanding, and creates a genuine cross-school engineering culture that outlasts the 10-month program. Peer mentors are recognized on the chapter leaderboard and receive a Zuup Peer Mentor certificate.

The Zuup Grand Finale

The Biggest Student Hardware Showcase in India

At the end of every program year, Zuup hosts the Grand Finale a national engineering showcase where the top-performing students from every chapter across India compete in a single, high-stakes event. This is not a science fair with cardboard displays. It is a curated engineering showcase judged by practicing engineers, founders, technologists, and researchers. Grant recipients present their funded projects at a dedicated track within the Finale.

How Students Qualify

- Top 3 project scores per region automatic via national leaderboard
- Wildcard entries for exceptional projects nominated by mentors
- Grant recipients automatic qualifier for the grant showcase track
- Research Symposium presenter's automatic qualifier for academic track
- Top Build Off winners from each quarter invited as special participants

What Winners Receive

- Zuup National Champion trophy physical, shipped to winner's school
- Hardware grants for continued project development
- Industry mentorship connections with Zuup's partner network
- National press recognition through Zuup's communication channels
- Eligibility for International Grand Finale 2027
- Zuup Alumni status with permanent network access

The Sponsored Trip Guarantee

If a student is selected for the Grand Finale and their city does not match the venue whether it is another state in India or another country entirely -- Zuup covers 100% of travel costs.

This includes: round-trip flights or confirmed train tickets, accommodation for the duration of the event, meals, and local transport to and from the venue. No applications. No sponsorship forms. No conditions.

This guarantee is in writing in the Chapter Agreement. It activates automatically for every qualifying student. The most gifted young engineer from a Tier 3 city gets the same stage as one from South Mumbai.

International Expansion (Zuup Global)

Starting 2026, Zuup is taking the Grand Finale international, inviting top students from partnered chapters outside India to compete alongside Indian finalists. The international event rotates host cities and brings together student engineers from across Asia and beyond. The same sponsored trip guarantee applies to international finalists -- an international student selected for a Finale in India gets a fully sponsored trip to India. An Indian student selected for a Finale in another country gets a fully sponsored trip there.

Why Zuup Chapters (The Honest Comparison)

What Principals Need to See Side by Side

Every program claims to be different. Below is a factual, point-by-point comparison of Zuup Chapters against the typical school technology club whether run internally, by a national platform, or by a coaching institute. The comparison uses criteria that actually matter for engineering education outcomes. Headers are written as the questions a principal would ask.

What Principals Ask About	Zuup Chapters	Typical School Tech Club
Real hardware in students' hands	Day 1 RPico + ESP32 in kit and real word coding not building blocks	Shared lab set, if any hardware exists at all OR non-technical building block based coding
Curriculum focus	Electronics, embedded systems, IoT, PCB design	Business, apps, PowerPoint, pitch decks
Mentors	Vetted engineers, compensated, certified by Zuup	Teachers, volunteers, or no dedicated lead
Kit ownership	Student keeps everything permanently	School lab property, returned at end
PCB design + soldering	Full dedicated module real boards fabricated	Almost never offered anywhere in India
Research paper publishing	Mentor-guided pathway, IJRASET standard	Not available in any current school club
Student grants	Up to Rs.1,00,000 for outstanding projects	Not available anywhere
National competition	Included + auto-eligible via leaderboard	Separate entry fee, ad hoc
International opportunity	100% sponsored for shortlisted students	Not available
External recognition	Evaluated in national innovation platforms and award forums	Unverified programs with no external validation
Non-profit structure	100% NPO	Many clubs run for school revenue or brand image
Founder's own school pilot	Proved at founders school before national launch	No track record in most cases

The comparison above is not marketing. Every Zuup claim is verifiable: the hardware kit is listed with specific components, the mentor model is contractual, the research paper has a DOI, the Shark Tank clearance is on record, the grant amount is specified to the rupee. A principal who wants to verify any line in that table is welcome to and Zuup will provide the documentation.

What Principals Often Worry About

Zuup has spoken to enough school administrators to know that the questions below come up in almost every conversation. They are answered here so that the first call with Zuup is about action, not background.

What Principals Ask	Zuup's Answer
What if a student drops out mid-program?	The student keeps the hardware kit they have received. The LMS access continues till end of program year. No refunds are issued after Month 2, which aligns with kit delivery. Schools should communicate this to parents at enrollment.
Does the club need a dedicated room?	No. Any classroom, computer lab, or open space works. Zuup mentors bring their own demonstration kit. Students work on their personal kits at their desks.
Can the school set its own session schedule?	Yes. Zuup provides a monthly session guide but exact days and times are coordinated with the school timetable. Mentors are flexible across weekdays and Saturdays.
What if students have no prior electronics experience?	That is the expectation. The curriculum starts from absolute zero. No prerequisite knowledge is needed. The kit is designed for first-time builders.
How does research paper publishing work practically?	Month 10 curriculum includes a research writing module on the LMS. Students who complete strong Month 9 projects are nominated by mentors. Zuup's team reviews and co-guides submission to appropriate journals like IJRASET where Zuup itself has a published, peer-reviewed paper.
Is the grant guaranteed?	No. The Rs.1,00,000 grant is competitive and awarded to students with genuinely exceptional, technically ambitious project proposals. Mentor nomination is required. Grants are milestone-based, not lump sum.
Who handles the competition logistics?	Zuup HQ handles all competition logistics: registration, scheduling, judging panels, and results. The school and chapter mentor are informed and involved but do not bear any administrative burden.
Can multiple chapters exist in one school?	Yes. Large schools can run separate chapters for middle school (Grade 6-8) and high school (Grade 9-12) cohorts simultaneously, each with their own assigned mentor.

How to Start a Zuup Chapter at Your School

Three Steps. Two Weeks. Done.

Partnering with Zuup Chapters requires no lengthy approval process, no large upfront payment, no multi-year commitment, and no dedicated room or infrastructure. The three steps below take less than two weeks from first contact to launch day.

1 Express Interest	Contact Zuup via jagrit@zuup.dev or zuup.dev. A Zuup representative calls within 48 hours to walk your administration through the chapter setup process, answer questions, and align on batch size and start date.
2 Chapter Agreement	Zuup sends a simple one-page Chapter Agreement. No multi-year lock-in. No large deposits. Your school is listed on the national Zuup directory the moment the agreement is signed.
3 Launch Day	Students receive their hardware kits, Zuup merch, and LMS credentials. The chapter is active. The mentor's first visit is scheduled. Your school's Zuup Chapter is officially open.

What the First Month Looks Like

Week 1: Chapter Agreement signed. School listed on national Zuup directory. Kit order placed with Zuup's supply chain. Mentor assigned and introduced to the school point of contact.

Week 2: Kits arrive at school. LMS credentials generated for every enrolled student. Zuup sends a parent communication template for the school to share explaining the program.

Week 3-4: First mentor session at school. Students unbox kits, set up LMS accounts, and complete Module 1. Mentor files first session report. Chapter leaderboard activates. The Zuup Chapter is live.

Enrollment Logistics for Principals

Fee collection: Rs.12,000 per student, collected by the school and remitted to Zuup as a batch payment before kit dispatch. Monthly installment arrangements available on request.

Batch size: Minimum 20 students for a chapter to be viable. Maximum 40 per chapter cohort. Schools with more than 40 interested students can run two separate cohorts.

Start dates: Rolling. Chapters can start from April for session 2026-2027. Zuup aligns the 10 month arc to the school's academic calendar so Month 10 falls before board exam season.

Dropout policy: No refund after Month 2 (post-kit delivery). This must be communicated to parents at enrollment. The student retains the kit regardless of dropout.

Invoices and official receipts are issued by Zuup for all remitted program fees.

Your School's Chapter

A school that hosts a Zuup Chapter will be known as a school that takes engineering education seriously. Not in the abstract concretely. Students from your school will build circuits at 13, design PCBs at 14, publish research at 15, win national competitions at 16, and present to industry panels at 17. That reputation does not come from a syllabus change. It comes from a program that does what it says.

We welcome the opportunity to discuss whether Zuup Chapters aligns with your institution's vision for technical education.

Contact Zuup to Start a Chapter

Chapters are accepted on a rolling basis. Batches are capped at 40 students. Schools that enroll early receive priority mentor assignment and preferred regional competition hosting rights.
